Fair Dinkum Fertilizers Premium is a liquid seaweed based product specially formulated for use in the production of crops where the application is by fine boom sprays, aerial sprays or dripper systems. Premium contains macronutrients, (Nitrogen, Phosphorus and Potassium) which are soluble and can be absorbed through the leaves. It also contains a range of trace elements including copper and zinc, which are commonly deficient in Australian soils. It is particularly suitable for Cereal and Brassica, (Turnips, Swedes and Canola) and fodder crops when these are grown as part of an overall rotational system in mixed animal and crop farming. It is also suitable for application to pasture.

Directions:

Spray in early morning or late afternoon. Do not apply in full sun. Dilute 1 part product with at least 50 parts water.

Cereals: Apply 10-15 ltrs per hectare at four leaf stage or soon after, or two applications of 5-7 ltrs per hectare at four leaf stage or soon after, and the second 2-3 weeks later.

Brassica: Apply 5-7 ltrs per hectare when tops are 5-8cm high, and repeat 2-3 more times at 2-3 week intervals.

In order to reap the benefits of increased growth, spray at least 2-3 weeks before allowing stock to graze on treated pastures. Spraying equipment should be thoroughly cleaned after use to avoid product crystallising.

Analysis

Nitrogen	5.7 %
Phosphorus	1.0 %
Potassium	5.6 %
Sulphur	6000 ppm
Copper	555 ppm
Zinc	555 ppm
Manganese	100 ppm
Boron	60 ppm
Molybdenum	10 ppm
Filtration	100 mic

Premium - 20 ltr

%W/V is grams per 100ml of product
 ppm is parts per million on weight basis
 g/l is grams per litre
 mic = microns
