

About Us...

We at Fair Dinkum Fertilizers pride ourselves in providing the best products using sustainable resources to support farmers and the home gardener.

Whether you're looking for frost protectant, seed treatment, propagation, increased fruit set, a broad acre fertilizer or just a healthy nutritional boost for your beloved plants, then Fair Dinkum Fertilizers is for you!

Fair Dinkum Fertilizers is an Australian company, and we believe is the leading harvester, manufacturer, processor and supplier of "all natural seaweed products".

In short... we have full quality control of all our products from start to finish.

Fair Dinkum Fertilizers seaweed products are made from fresh Australian Bull Kelp, collected off the rugged North West coast of Tasmania, which is arguably from some of the cleanest waters in the world.

After over 30 years of research into our products, we can boast the most technologically advanced liquid seaweed on the market, whilst retaining higher levels of plant growth regulators, hormones and nutrients. This can only be obtained through our unique manufacturing process. We are sure that you will be totally satisfied with your purchase of Fair Dinkum Fertilizers, along with that...you will reap the benefits of our products on all of your plants and crops.

We hope you will enjoy it as much as we enjoy manufacturing it for you.

Superfine Range

For Boom Spray & Dripper Systems

Superfine

For Boom Spray & Dripper Systems

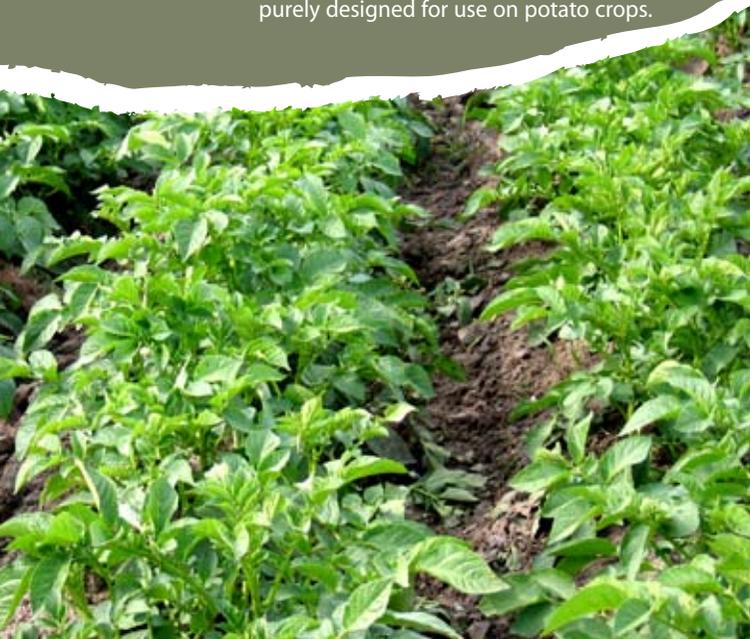

The SUPERFINE range consists of four basic products;

SUPERFINE - A pure Australian Bull Kelp extract for general use. Filtered to 100 microns, this product is ideal for use with boom sprays and drippers. With a pH of 3.5, it is the recommended product to mix with acidic agricultural chemicals such as Sulphates, Nitrates and Fish emulsions.

SUPERFINE PREMIUM - This is a fast acting fertilizer that can be widely used for cropping, pasture and vegetable production. Filtered to 100 micron, it is suitable for use with boom sprays and drippers, with readily available Nitrogen, Phosphorus and Potassium (NPK) and a range of trace elements.

SUPERFINE SPURT - An Australian Bull Kelp extract with a higher nitrogen concentration. With added Phosphorous, Potassium and trace elements, this product is designed specifically for pasture and broad acre applications.

SUPERFINE HiP - An Australian Bull Kelp extract with higher Phosphorus and Potassium with added trace elements of Magnesium and Manganese, purely designed for use on potato crops.

How does it work?

All products within the SUPERFINE range work by virtue of the plant growth regulators, (PGRs), that they contain. The particular PGRs in these products cause the plant to send out material (root exudates) in to the root zone (the rhizosphere) to feed the soil microbes.

Root exudate is mostly sugars which are synthesized by the plant from water and carbon dioxide. However, importantly, root exudates also contain small amounts of trace elements and amino acids (organic substances containing nitrogen). Microbes use root exudate to break down material in the soil into a form in which it can be taken up by the plant.

The SUPERFINE range of Liquid Seaweed products are produced by alkaline hydrolysis which has a range of natural plant growth regulators (PGRs) sugars, amino acids and trace elements.

The entire SUPERFINE range has undergone a two step process to remove any "glugginess" from within it, and at the end of this process, the SUPERFINE range of products are all filtered to 100 micron, subsequently these products will not block boom sprays or drifter systems during application.

What are the benefits of SUPERFINE?

There are many benefits to the SUPERFINE range of products.

- The entire SUPERFINE range is filtered to 100 microns.
- It is suitable to go through boom sprays and drifter systems without blocking the jets.
- Fast acting formulation is taken up by the crop quickly.
- The delivery rate of SUPERFINE can be controlled and therefore delivered consistently.
- SUPERFINE straight liquid seaweed can be mixed with a fish emulsion and other products to address trace element deficiencies in soil.

Application Rates

Application rates vary between different products and crops. Please consult with Fair Dinkum Fertilizers for more detailed information on rates that would suit your specific requirements.

Product Analysis

	SUPERFINE	SUPERFINE PREMIUM	SUPERFINE SPURT	SUPERFINE HiP
Nitrogen (N)	--	5.7%	10%	--
Phosphorus (P)	--	1.0%	0.3%	4.6%
Potassium (K)	3.5%	5.6%	4.8%	8.5%
Sulfur (S)	0.9%	6000ppm	6000ppm	--
Copper (Cu)	--	555ppm	300ppm	--
Zinc (Zn)	--	555ppm	300ppm	--
Manganese (Mn)	--	100ppm	100ppm	400ppm
Magnesium (Mg)	--	--	--	1000ppm
Boron (B)	--	60ppm	60ppm	--
Molybdenum (Mo)	--	10ppm	10ppm	--

% - is W/V, grams per 100ml of product.
ppm - is parts per million on weight basis.
