Fair Dinkum Fertilizers Frost Guard is a blend of liquid seaweed and electrolytes which increases frost resistance in a wide range of crops. It also can be used to reduce heat stress. It contains a relatively high percentage of potassium and moderate percentage of phosphorus. It should not be used on Australian natives.

Directions:

The product should be applied as a foliar spray.

It is suitable for application through a fine boom spray or mister.

Do not apply when the temperature is above 25 degrees C.

Dilute with at least 10 times as much water.

In ULV spraying, it may be possible to use less water, but in such cases the product needs to be applied at temperatures below 20 degrees C and humidity of greater than 50%.

Frost Protection:

Stone fruit, apples and pears. Apply at the rate of 3-4 ltrs per hectare every 10-12 days.

Grapes:

If the shoots are less than 10 cm apply at 3-4 ltrs per hectare every 10-12 days and if shoots longer than 10cm apply at 3-4 ltrs per hectare every 7-9 days.

Canola:

Apply at the rate of 3-4 ltrs per hectare every 10-12 days starting 7-10 before pod fill. At least 3 applications need to be made.

Potatoes. Apply at the rate of 3-4 ltrs per hectare every 10-12 days throughout the frost danger period.

Frost Guard - 20 ltr

Analysis	
Potassium	9.2 %
Phosphorus	2.9 %
Filtration	100 mic

%W/V is grams per 100ml of product
 ppm is parts per million on weight basis
 g/l is grams per litre
 mic = microns
