Fair Dinkum Fertilizers MultiFeed is an effective balanced fertilizer organically based with added trace elements. It contains amino acids and seaweed extract as well as both macro and micro nutrients. It is most effective when applied to the foliage but can also provide nutrient to feed the beneficial soil microbes. Unlike conventional granular fertilizers MultiFeed is fast acting and foliar application ensures that the nutrients are available virtually immediately.

Avoid use during frost danger periods.

Directions:

Dilute 1:50 for coarse spray or 1:30 for fine spray.

Apply in mid to late afternoon when the temperature is 23 degrees C or less.

The product contains significant amounts of humate and may stain some plants, fruit or blooms.

Pasture: This product is ideal for use on pasture and can be applied every month or so during the growing season at a rate of 10 to 20 ltrs per hectare.

Horticultural crops: MultiFeed can be applied at a rate of 20 ltrs per hectare as a quick booster during the growing season. Care needs to be taken not to stain foliage when growing lettuce or cabbages.

Pulses, Canola, Lucerne and Cereal crops: MultiFeed is best used as a foliar feed during the period of fastest growth in conjunction with a reduced conventional or organic fertilizer treatment.

Fruit trees: Apply as a foliar feed at a rate of 10-20 ltrs per hectare two to three times, starting one week after bud burst with a month to six weeks between applications.

MultiFeed - 20 ltr

Analysis	
Nitrogen	12.0 %
Potassium	1.4 %
Phosphorus	5.3 %
Zinc	600 ppm
Molybdenum	10 ppm
Boron	65 ppm
Manganese	100 ppm
Filtration	100 mic

%W/V is grams per 100ml of product
 ppm is parts per million on weight basis
 g/l is grams per litre
 mic = microns
